## 5. Issues

Issue	Status	Notes
Time estimates for work items were short by up to 1000%	Red	<ul style="list-style-type: none"><li>- We've put every moment free we have in since the last iteration plan, we could not have done better in the time given</li><li>- Our biggest issue in this was the Use Case Diagram, where our understanding of the abstraction level caused us to rewrite multiple times</li><li>- We've gone through multiple iterationation of the current Use Case Diagram finding critical issues each time or reducing the scope (major time lost in lobby system use cases)</li></ul>
